SentiCon Company Overview

SentiCon is a boutique provider of cybersecurity and technology risk mitigation consulting services. With decades of experience throughout the US, Latin America, and Europe, we bring a unique approach to solving your cyber risk challenges.

Why We Are Different

Our consultants are former CISOs and risk executives who bring career-long perspectives to solve today's cybersecurity issues. Our experience, as practitioners and consultants, brings a unique perspective to the work we do.

We have spent years building security programs, managing global teams, and overseeing substantial operational budgets. We understand the need to provide business value and support those initiatives that drive revenue and satisfy Board strategies.

We firmly believe that the best security programs are a balance of people, processes, and technology orchestrated uniquely for each individual organization.

Consulting Designed For Success

Management Consulting

Our Management Consulting portfolio is focused on how risk management and cybersecurity are positioned within the organization, how risks are measured, overall program effectiveness, and ensuring the team has the level of experience and knowledge necessary to support the strategic business drivers. Our leadership experience can position your team for long-term success and growth.

- Fractional/virtual CISO
- Corporate Board advisory services
- Executive coaching and mentoring
- Security Program organizational structure
- Policy design and development

Technology Consulting

Our Technology Consulting portfolio is focused on how the security team, and the enterprise as a whole, leverages technology solutions to mitigate risks across the enterprise. From standard security assessments to helping build out critical security infrastructure, our consultants can assist with the delivery and support of many of your technology initiatives.

- NIST Cybersecurity Framework assessment
- Technology (IT) portfolio assessment
- Security portfolio assessment
- Security Operations Center (SOC) design
- Technology deployment program management
