

Portfolio Rationalization Assessment

SentiCon's Portfolio Rationalization Assessment service focuses on the optimization of security and risk software portfolios to maximize risk mitigation, enhance efficiency, enable business agility, and reduce costs.

Why We Are Different

"Cyber-Sprawl" is a significant issue faced by many enterprise security teams. The ever-expanding footprint of software and platforms purchased to address cyber risks leaves many organizations questioning operational inefficiencies, coverage gaps, licensing overspend, and duplicated solutions. Our expert team leverages our enterprise experience and industry best practices to help organizations rationalize their cybersecurity software assets, ensuring alignment with strategic business partners and corporate objectives.

Rationalization For The Enterprise

Risk Mitigation

Risk mitigation, after all, is the entire goal of deploying security platforms and solutions. Unfortunately, over time, the viability of these platforms changes, for better or for worse. However, rarely do security teams understand the impact these changing solutions have on their overall strategy. SentiCon's Portfolio Assessment is designed to identify risk gaps in products and services and provide a clear move-forward strategy around how to best leverage existing solutions and identify solutions necessary to close the gaps.

Operational Efficiency

With the ongoing talent shortage impacting many security teams, finding new and effective ways to increase efficiency and productivity is crucial for ongoing success. Our Portfolio Assessment will evaluate the deployment of your solution set to ensure you are getting the most from your spend, highlighting ways to better leverage existing platforms, increase automation, and provide potential future solutions that would enhance overall efficiency.

Business Agility

By most accounts, a successful security program empowers and enables its business partners, not hinder them. Our Portfolio Assessment will highlight ways by which you can leverage your existing solution set to empower and expedite business transformation and growth, not slow it down. Additionally, SentiCon can suggest strategic investments that will accelerate future business enablement, agility, and growth.

Cost Containment

Cost containment/reduction initiatives have become a part of every budget cycle for most enterprises. The ability to justify the existing expense, or provide a rationalization for new purchases is not just around risk any longer, it's around adding enterprise value. Our Portfolio Assessment will provide strategic metrics and key performance indicators for your critical platforms that can be associated directly with cost containment initiatives, whether from staffing saves, automation, or long-term business functionality.
