

SentiCon Security and Wolfpack Security Announce Strategic Partnership

FOR IMMEDIATE RELEASE

SentiCon Security and Wolfpack Security Announce Strategic Partnership to Expand Virtual CISO and Application-Security Services

SentiCon Security, a global cybersecurity and technology-risk consulting firm, and Wolfpack Security, a boutique application-security firm, today announced a strategic partnership designed to bring each other's capabilities to a broader client base.

Under the agreement:

- Wolfpack clients will now have access to SentiCon's Virtual Chief Information Security Officer (vCISO) services.
- SentiCon's advisory clients will gain direct access to Wolfpack's complete application-security lifecycle services.

Leadership Comments:

"We are thrilled to formalize this partnership with Wolfpack Security," said John Masserini, Managing Partner at SentiCon Security. "For years, SentiCon has focused on delivering board-level cybersecurity leadership through our vCISO model, helping organizations design, mature, and operationalize security programs that reduce risk in measurable ways. What we consistently hear from clients is that, while governance and strategic direction are crucial, they also need deeper, code-level application-security expertise, and that's where Wolfpack excels."

He continued: "Wolfpack's specialization in application security, secure code review, and hands-on vulnerability testing perfectly complements our governance-first approach. Together, we can now offer clients a security program that is both strategically grounded and technically robust. Our clients will benefit from the same executive-level oversight they expect from SentiCon, combined with Wolfpack's modern engineering-driven approach to application security."

"That combination is rare in today's market," he added. "Most firms either focus on high-level strategy or technical testing, not both. By joining forces with Wolfpack, we're giving organizations a complete, end-to-end security lifecycle solution that scales with them."

“This partnership fills a gap the industry has felt for a long time,” said Clea Ostendorf, CEO of Wolfpack Security. “Companies don’t just need strategy or testing, they need both, working in lockstep. By combining SentiCon’s executive-level leadership with Wolfpack’s engineering-first AppSec model, we’re finally giving organizations a security program that moves at the same speed they build software. It’s rare to find a partner whose values and capabilities align this naturally, and we’re excited to help teams build secure, resilient products without slowing down innovation.”

“We’re incredibly proud to partner with SentiCon Security,” said Jonathan Rabovsky, COO of Wolfpack Security. “Our mission has always been to help engineering teams build secure software without slowing down innovation. By integrating SentiCon’s vCISO leadership and governance capabilities into our service portfolio, we’re able to give clients something they’ve been asking for, a strategic layer of cybersecurity leadership that ties directly into the engineering reality of how their products are built. We’re now able to support the entire lifecycle of a security organization.”

About SentiCon Security:

Founded in 2004, SentiCon Security is a global consulting firm specializing in cybersecurity and technology risk mitigation. Founded by John Masserini after leading financial services security organizations over the last two decades.

About Wolfpack Security:

Wolfpack Security is a boutique application-security firm founded by Jonathan Rabovsky and Clea Ostendorf. Their developer-first approach to application security has allowed them to offer services such as application security assessments, secure code review, vulnerability management, and staff augmentation.
